RESEARCH PROFILE

Ph.D. candidate in Computer Science at Tulane University, expected to graduate in December 2026. Research focuses on longitudinal EHR modeling, uncertainty and evaluation for clinical AI, wearable biosignals, and clinically aligned generative models. First-author work spans EHR trajectory evaluation, offline-RL and OPE benchmarking, clinically aligned generation, and intervention-aware cardiac forecasting; peer-reviewed venues include USENIX Security, MICCAI, MWM, ICASSP, and AI-ML Systems.

EDUCATION

Tulane University Ph.D. in Computer Science, expected Dec 2026	<i>Aug 2022 – Present</i> New Orleans, LA
The Australian National University M.S. in Computer Science	<i>Jul 2019 – Jul 2021</i> Canberra, Australia
Dongguk University B.S. in Electronics, Information & Communication Engineering	<i>Mar 2012 – Feb 2018</i> Seoul, South Korea

EXPERIENCE

Samsung Research America – Research Intern Mountain View, CA	<i>May 2025 – Aug 2025</i> Supervisor: Dr. Sharanya Desai
--	--

- Designed a biomarker-specific temporal decay loss for smartwatch PPG paired with sparse clinical labels. Across 450 participants and 10 biomarkers, the model averaged 0.712 AUROC and 0.715 AUPRC.
- Established a subject-wise evaluation protocol linking dense PPG windows to sparse clinical measurements, with signal-quality screening and biomarker-level ablations.
- Worked with research scientists and engineers to turn wearable sensing constraints into a fixed modeling and evaluation protocol.

Tulane University, TRIAD Lab – Research Assistant New Orleans, LA	<i>Aug 2022 – Present</i> Supervisor: Dr. Jihun Hamm
---	---

- Lead research on longitudinal EHR modeling, wearable biosignals, medical imaging, and synthetic data with collaborators in computer science, cardiology, and industry.
- Developed audits that separate fixed-anchor prediction from long-horizon trajectory modeling, including future-state recovery, uncertainty, robustness, and failure-mode tests for clinical foundation models.
- Built EHRDyn, a five-task benchmark and public artifact for comparing 21 offline-RL method specifications and six OPE estimators across complementary simulators, with analyses of estimator support, uncertainty, and ranking stability.
- Developed CRAFT, a reward-based diffusion adaptation method that uses clinical checklists and multimodal model feedback to improve medical image alignment and downstream utility.
- Developed multimodal models for atrial-fibrillation ablation outcomes using LGE-MRI, procedure variables, and follow-up data; published the SOFA framework at MICCAI 2025.

Airport Railroad Express – Hardware Engineer Incheon, South Korea	<i>Nov 2017 – May 2019</i>
---	----------------------------

- Tested and debugged automated fare-collection and passenger-service hardware in a high-reliability transportation system.

SELECTED RESEARCH CONTRIBUTIONS

- **EHR foundation-model audit:** Tests whether fixed-anchor outcome gains transfer to long-horizon trajectory structure, future-state recovery, and uncertainty.
- **EHRDyn benchmark:** Compares forecasting, offline-RL, world-model, and OPE workflows under fixed contracts and complementary simulators.
- **Clinically aligned generation:** Uses structured clinical criteria and multimodal evaluators to train and audit medical diffusion models.
- **Sparse-label wearable learning:** Learns biomarker-specific temporal decay from dense PPG and infrequent laboratory labels.

SERVICE AND HONORS

Reviewer: NeurIPS 2026; ICML 2026; MICCAI 2024–2026; IEEE TCSVT, 2023.

Honors: FIRA RoboWorld Cup 2016, 1st Place; International Robot Contest 2016, 2nd Place.

SKILLS

Methods: Longitudinal modeling, time-series forecasting, representation learning, multimodal learning, diffusion models, uncertainty estimation, model auditing.

Engineering: Python, PyTorch, NumPy, pandas, Scikit-learn, Hugging Face, SQL, Git, AWS, Weights & Biases.

Languages: Korean (native), English (fluent).
